Prod. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                 production of Gay- and/or Euv-containing proteins. Synthetic Env and Gag expression cassettes exhibit increased potency for induction of cytotoxic T-lymphocyte (CTL) responses by DNA immunization. Gag of HIV-1 self-assemble into non-infectious virus-like particles which are used as a matrix for the proper presentation of an antigen entrapped or
                                                                                                  Expression cassettes comprising a polynuclectide encoding antigenic type C human immunodeficiency virus (HIV) Gag or Env polypeptides are useful in DNA immunication, generation of packaging cell lines and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 241 accytygenaecetytaetygeytygaegeegyeategaagteegegaeareaayyaggee 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4 ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Expression cassettes comprising a polynuclectide encoding antigenic type c human immunodeficiency virus (HIV) Gag or Env polypeptides are useful in DNA immunization, generation of packaging cell lines and production of Gag- and/or Env-containing proteins. Synthetic Env and Gag expression cassettes exhibit increased potency for induction of cytotoxic T-lymphocyte (CTL) responses by DNA immunization. Gag of HIV-1 self-assemble into non-infectious virus-like pailicles which are used as a matrix for the proper presentation of an antigen entrapped or associated to the immune system of the host.
                                                                                                                                                                                                                                                                "Codon usage pattern was modified and inhibitor; elements (INS) and RRE sites were inactivated resulting in improved expression"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            etgegeeeeggeggeaagaagtgetacatgatgaageacetggtgtggggeeageegeggg 120

```

The present sequence is the coding sequence of a HIV Gag expression cassette, Gag.M.dSF2. The Gag priving of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV

                                                                                                 The present invention relates to synthetic HIV Gaq and Env expression cassettes. The Gaq protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry steps in viral replication. The expression cassettes and early post entry steps in viral replication. The expression cassettes which may then be used to vaccinate against HIV Gaq- and Env-polypeptides which may then be used to vaccinate against HIV infection and acquired immanodeficiency synthologing the present sequence is a synthetic construct constructed in the generation of the expression cassettes of the present invention. This construct is bicistronic in that the coding sequences for Env and Gaq are under the control of a single CMV promoter and between the two coding sequences an Internal Ribosome Entry Site (IRES) is present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     646 raagecegarreegtagemer agecagatagegerin 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1707 | 1

The present invention relates to synthetic HIV Gag and Env expression cassettes. The Gay protein of HIV is needed for the assembly of virus-like particles. In addition, the Gay protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry steps in viral replication. The expression cassettes may be used for the recombinant expression of HIV Gag- and Env-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS). The present sequence is a synthetic construct constructed in the generation of the expression rassettes of the present invention. This construct is bicistronic in that the coding sequences for Env and Gag are under the control of a single CMV promoter and between the two coding sequences an internal Ribosome Entry Site (IRES) is present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3435 geogeoggeaccageageagecaggtgagecagaactaececategtgeagaacetg 3494

```
The present invention relates to synthetic HIV Gaq and Env expression cassettes. The Gaq protein of HIV is needed for the assembly of virus-like particles. In addition, the Gaq protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry steps in viral replication. The expression cassettes may be used for the recombinant expression of HIV Gaq- and Env-polypeptides which may then be used to vaccinate against HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              infection and acquired immunodeficiency syndrome (AIDS). The present sequence is a synthetic construct constructed in the generation of the expression cassettes of the present invention. This construct is bicistronic in that the coding sequences for Env and Gaq are under the control of a single CMV promoter and between the two coding sequences an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1276. etggaggettegeegtgaaeeeeygeet grit ggagaeeaaeggagguet geegeeaaat e -3335

```
The present invention relates to synthetic HIV Gay and Env expression cassettes. The Gag protein of HIV is needed for the assembly of stages. The Gag protein is needed for the assembly of stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassettes may be used for the recombinant expression of HIV Gag- and Env-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS). The present sequence is a synthetic construct constructed in the generation of the expression cassettes of the present invention. This construct is bicistronic in that the coding sequences for Env and Gag are under the control of a single CMV promoter and between the two coding sequences an internal Ribosome Entry Site (IRES) is present.

present sequence was cloned and used to generate the explession cassettes of the present invention. The expression cassettes may be used for the recombinant expression of HIV Gaq-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry steps in viral replication. The present invention relates to synthetic HIV Gag expression cassettes. The virus-like particles. In addition, the Gag protein is involved in Many

```

. . m The present sequence is the coding sequence of a HIV Gag-protease expression cassette, Gagpröt Mods. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is inverted in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunoshiticiency syndrome (AIES). 406 -caqqqccatustava caqqcrateavecqcaccetqaacqcetgqqtqq46561 - ct gegenninggeggeagaageant anat get gaageamet ggt.gt ggeerageegeggegg - 120 12] otggagggettegeertgaageeeggeetgetggagageegeegagggagggaageaggate 180 187 etgggeragetykraykeeagestylayareeggeageggaggagetgeagaae 246 401 et upaca a upa equipa qua gra qua a construcción de construcción d Fill TILLS accepted in a conference of the conference of the second section of the second sec 427 ragggecagatggtgrannaggecateagneeeegnaceetgaacgeetgggtgaaggtg 486 487 intriguidadadquict teageneergaggtgateeecatgt teagegeectgagegagge 546 Latyygoyconcycoagrafeetycgogggagaagotygaaagtygggagaagateege 60 Expression casettes encoding the human immunodativiency virus (HIV) Srivastava I, Lian Y, Hartog K, Liu H, 241 accqtgqccaccctqtactqcqtqcacqccqccatcqaqqtccqqqqacaccaaqqaqqcc 247 arregtygypraerentyt arrtycytygeaeragygolategaegylinaaggaeeeedaaggaggee 127 et ggagegettegeegtgaaceeggeet getggagaeeagegaggetgeeggeeagate 18] atgaagcayetgragereygeeetgragareygeacegaggatgegeageetgtatacaae 307 ict ggagaugat ngaggaggaggaggaggagt.chaagaagauggeegageeggeegee 46] gregacqqearrr ririr aqqtqaqreagaaetareerateqtgeagaaeetg 466 atogaqqqqqqqqqqqqqqqqqqqqqqqqqqqqqqqqq 74.1%; Score 1117.8; DB 21; Length 1853; 85.1%; Pred. ```
The present sequence is the coding sequence of a HIV Gag protease expression cassette, GagProtMod.SF2 (GPI). The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                           Expression cassettes encoding the human immunodeficiency virus (HIV) Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) ^\circ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 recombinant expression of HIV Gaggel politicles which may then be used to varyinate against HIV infection and acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the coding sequence of a HIV Gas protease expression cassette, GagProtMod.SF2(GP2). The Gag protein of HIV is needed for the assembly of viras like particles. In addition, the Gag protein is involved in many stages of the HIV lite eyele, including assembly, virion materation after particle release and carly post entry steps in viral replication. The expression cassette may be used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .81 at quadraget gengerer gengacet gengaee gagagagaget gegeageet gtasaae - 240

The present sequence is the coding sequence of a HIV Gaq-polymerase expression cassette, GaqPol.ModSF. The Gag protein of HiV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag polypeptides which may then be used to varcinate against HIV infection and acquired immunodeficiency syndrome (AIDS).

third retrovital nucleotide sequence comprising a DNA sequence of interest and lentivitus, preterably HIV, cis acting sequences required for packaging, reverse transcription and integration.

The packaging cell lines and viral particles can be used for gene therapy of gene replacement with improved safety. They can also be used in the development and production of varcines and biochemical reagents. The present sequence is a gag coding region of codon optimised HIV gagpol sequence. This sequence is used in the packaging cell line. Godon optimisation results in improved expression of the gagpol protein and reduces the risk of recombination between the transfer
The packaging cell line comprises a mammalian cell, a retroviral DNA comprising a coding sequence for a lentification, preferably HIV, gagpol, where the coding sequence has been mutagenised to improve expression of the viral gagpol proteins, a second retroviral nucleotide sequence comprising the coding sequence for a heterologous envelope protein and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 etggagggettegeectgaaeeee gasetgetggagaaeegggggetgeaageage 180

                                                                                                                                                                                                                                                                                        ·.
                                             type c human immunication, generation of packaging cell lines are useful in DNA immunication, generation of packaging cell lines and production of Gag- and/or Env-containing proteins. Synthetic Env and Gag expression cassettes exhibit increased potency for induction of cytotoxic I-lymphocyte (CTL) responses by DNA immunication. Gag of HIV 1 self-assemble into non-infectious virus-like particles which are used as a matrix for the proper presentation of an antigen entrapped or associated to the immune system of the host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Codon usage pattern was modified and inhibitory elements (INS) and RRE sites were inactivated resulting in improved expression"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expression cassettes comprising a polynuclectide encoding untigenic type C human immunodeficiency virus (HIV) Gag or Env polypeptides are useful in DNA immunization, generation of packaging cell lines and

production of Gaq- and/or Proventaining proteins. Synthetic Envaridacy expression cassettes exhibit increased potency for induction of cytotoxic T-lymphocyte (CTL) responses by DRA immunication. Gag of HIV-1 self-assemble into non-infertious virus-like particles which are used as a matrix for the proper presentation of an antiqen entrapped or associated to the immune system of the host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polynucleotide encoding antigenic type C HIV Gag polypeptide or a HIV Env polypeptide and the polypeptide useful for immunizing a mammal especially human against HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expression cassettes comprising a polynucleotide encoding antigenic type C human immunodeficiency virus (HIV) sug or Env polypeptides are useful in DNA immunization, generation of packaging cell lines and

Expression cassettes comprising a polynncleotide encoding antigenic type C human immanodeficioney virus (HIV) Gag or Env polypeptides are useful in DNA immunization, generation of packaging cell lines and production of Gag and/or Env-containing proteins. Synthetic Env and dag expression cassettes exhibit increased potency for induction of cytotoxic T lymphocyte (CTL) responses by PNA immunization. Gag of HIV-1 self-assemble into non-infectious virus like particles which are used as a matrix for the proper presentation of an antigen entrapped or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó
                                                                                                                                                                                                                                                                        Expression cassettes comprising a polynucleotide encoding antigenic type C human immunodeficiency virus (HIV) Gay or Env polypeptides are useful in DNA immunization, generation of packaging cell lines and production of Gag- and/or Env-containing proteins. Synthetic Env and Gag expression cassettes exhibit increased potency for induction of cytotoxic T-lymphocyte (CTL) responses by DNA immunization. Gag of HIV-1 self-assemble into non-infectious virus-like particles which are used as a matrix for the proper presentation of an antigen entrapped or associated to the immune system of the host.

The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-ontry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV.
                                                                                                                                                                                          The present invention relates to synthetic HIV Gay expression cassettes. The Gay protein of HIV is needed for the assembly of virus-like particles in addition, the Gay protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gaq-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS). The present sequence is the coding sequence of HIV p55 Gag Major Homology Region. This sequence is located within the F24-CA sequence of Gag. Mutations in this region can severely impair particle production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to synthetic HIV Gag expression cassettes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Expression cassettes encoding the human immunodeficiency virus (HIV) Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
Expression cassettes encoding the human immunodeficiency virus (HIV) Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) -

accessory protein independent fertivites, preferably human immunodeficiency virus (HIV), derived retroviral rector particles. The packaging cell line comprises a mammalian cell, a retroviral DNA comprising a coding sequence for a lentivirus, preferably HIV, gagpol, where the coding sequence has been mutagenised to improve expression of the viral gagpol proteins, a second retroviral nucleotide sequence comprising the coding sequence for a heterologous envelope protein and a
                             sequence is a common region found in Gay coding sequences: Gay protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        therapy or gene replacement with improved safety. ```
in the development and production of vaccines and biochemical readents. The present sequence is a gas coding region of codon optimised BIV gaspol sequence. This sequence is used in the packaging cell line. Codon optimisation results in improved expression of the gaspol protein and reduces the risk of recombination between the transfer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the coding sequence of a HIV Gag expression cassette, Gag.ModSF2. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life eyele, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression assecte may be used for the recombinant expression of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the coding sequence of a HIV Gaq-protease expression cassette, GagProt.ModS. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).

HIV Gag-protease expression cassette coding sequence GagProtMod.SF2(GP2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the coding sequence of a HIV Gag-protease expression cassette, GagprotMod.SF2 (GPI). The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 gacatcaagcagggccccaaggagcccttrrgrgactargtggaccgcttcttcaagacc 60

The present sequence is the coding sequence of a HIV Cag-protease expression cassette, SagrottotMod.SF2(CF2). The Cag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life eyele, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a HIV Gaq/Hepatitis C virus (HCV) core fusion coding sequence. The Gag protein of HIV is needed for the assembly of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 ganathaughdaghgannnaadhaghnaftengantandthganntanttetteadhann 60

```
The present sequence is the coding sequence of a HIV Gag-polymerase expression cassette, GagPol.ModSF. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion
                                                                                                                                             present sequence was cloned and used to generate the expression cassettes of the present invention. The expression cassettes may be used for the recombinant expression of HIV Gaq-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome
virus-like particles. In addition, the Gaq protein is involved in many stages of the HIV life eyele, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The present invention relates to synthetic HIV Gaq expression cassettes. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           replication. The expression cassette may be used for the recombinant expression of HIV 3ag polypoptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           maturation after particle release and early post-entry steps in viral
